## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 11-13, 16-18, drawn to polynucleotides, vectors, host cells and methods of making a polypeptide classified in at least class 435, subclass 69.1, for example.
- II. Claims 14-15 and 20, drawn to a polypeptide and composition thereof, classified in at least class 530, subclass 399, for example.
- III. Claim 19, drawn to an antibody, classified in class 530, subclass 387.1, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the polynucleotides of Group I could be used in an entirely different method, such as in a method of detection of the polynucleotide in a sample, rather than in a method of making the polypeptide.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be

Art Unit: 1647

shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the proteins of Group II could be used in an entirely different manner, such as in a method of Group VI, rather than in a method of making the antibody.

Inventions I-III are also unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are directed to chemically different compounds which can be made and used without each other. For example, the compounds of Group I function in a different manner than the compounds of Groups II-III based on the chemical nature of the molecules. Furthermore, the inventions of Groups I-III lack a common utility which is based upon a common special technical feature which is disclosed as being responsible for the common utility.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the necessity for non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Art Unit: 1647

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined (including election of species) even though the requirement be traversed (37 CFR 1.143).

### **Conclusion**

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
